Certified 2026 Edition

REESH SYSTEM

Poultry Farm Management ERP Platform

Comprehensive User & Operational Manual

A complete operational handbook for poultry enterprise owners, supervising veterinarians, field engineers, and accounts managers to manage flocks, health protocols, cash custodies, attendance logs, and consolidated PDF reports.

Enterprise Admin | Biological Oversight | Clinical Health | Flock Operations | Finance & Audit

Sales & Support Hotline: +20 155 877 7558

Official Website: https://reesh-erp.vercel.app

Table of Contents

Click on any section to navigate directly to its detailed explanation:

1. Quick Start Guide
5 actionable steps to set up and start logging farm operations in 10 minutes
p. 3

2. Download, Installation & Windows SmartScreen Bypass
Promo website, installer setup, SmartScreen resolution, and code self-registration
p. 4

3. Roles & Operational Permissions Matrix
Core duties for Owner, Supervising Vet, Field Vet, Farm Engineer, and Account Manager
p. 5

4. Farm, House & Flock Production Cycle Setup
Broilers, Sasso, Commercial Layers, and Breeders with international breed curves
p. 6

5. Daily Operational Logs & Egg Inventory Management
Feed, water, mortality, sample weights, egg grading, and official dispatch notes
p. 7

6. Multi-Engineer Assignments & Smart Replacement Lifecycle
Co-Engineer teams, seamless replacement, open custody audit, and prorated logs
p. 8

7. Monthly Decoupled Attendance & Missing Day Banners
Independent monthly sheets for workers, engineers, vets, and retrospective logging
p. 9

8. Financial Operations, Cash Custody & Official Vouchers
Engineer cash custody, expense tracking, settlement approval, and payment slips
p. 10

9. Standardized Tripartite PDF Reports & Cloud Branding
LTR/RTL aligned headers, company logo integration, and consolidated cycle PDFs
p. 11

10. Local Encrypted Backup & Certified Support Channels
One-click military-grade backup, rapid restore, hotline, and sales contacts
p. 12

Quick Start Guide (5 Simple Steps)

Launch your farm operations and export your first PDF report in 10 minutes:

1

Download & Install Application

Visit the official promo portal (reesh-erp.vercel.app) to download Windows Setup (Reesh_setup.exe) or Android APK (Reesh.apk), or open the cloud web app directly.

Lightweight, self-contained, and requires zero complicated database configurations.

2

One-Time Windows SmartScreen Bypass

When launching the installer for the first time, if Windows displays a blue protection popup: click "More info", then click "Run anyway" at the bottom to proceed smoothly.

Standard Windows behavior for newly released software; appears only once.

3

Self-Register with Your Activation Code

On the login screen, click "Register New Company with Activation Code", enter your designated code, company details, and password to instantly activate your account.

Instant automated onboarding with zero waiting time.

4

Create Your Farm & Assign Team Members

From the dashboard, create your first farm, select its production activity (Broilers, Layers, Breeders), launch a new flock cycle, and assign your engineers and supervising vet.

Supports co-engineers for multiple shifts or seamless replacement.

5

Log Daily Production & Export Branded Reports

Engineers log daily feed, water, mortality, weights, and worker attendance. Owners and vets export tripartite PDF reports branded with your company logo with a single click.

Executive-level PDF exports ready for management and investors.

Chapter 1: Download, Installation & SmartScreen Bypass

Official channels and smooth Windows installation:

Official Distribution Channels:

- Promotional Web Portal: https://reesh-erp.vercel.app for direct downloads and feature briefs.
- Direct Windows Installer: Reesh_setup.exe (fully bundled with C++ runtime).
- Direct Android Package: Reesh.apk for smartphones and tablets in the farmhouses.
- Cloud Web Application: https://reesh-app.web.app for instant access via browser.

How to Bypass Microsoft Defender SmartScreen (Free & Permanent):

SmartScreen appears when opening newly downloaded executable files that have not yet accumulated huge cloud downloads. It is easily and safely handled:

1. Click the small link: "More info" in the blue dialog.
2. Click the new button that appears at the bottom: "Run anyway".
3. The standard installer starts immediately and will not ask again.

Right-click Reesh_setup.exe > Properties > check "Unblock" at the bottom > click OK.

Self-Registration & First-Time Onboarding:

Activating your company account with zero friction:

1. Secure Activation Code:

Sales delivers a unique activation code (e.g., DR-PRO-2026-XXXX) containing your subscription tier, farm capacity, and expiry date.

2. Enter Company Information:

Input company name in Arabic and English (for PDF headers), owner full name, email, and password.

3. Automated Provisioning:

Clicking "Register Company & Activate Account Now" provisions your enterprise workspace and automatically signs you in.

All Rights Reserved © Reesh System 2026

Chapter 2: Operational Roles & Permissions Matrix

Strict division of responsibilities for operational excellence and financial integrity:

1. Company Owner / General Manager (Company Owner)

- Complete authority across all farms, houses, finances, and personnel.
- Create farms, launch production cycles, and approve flock final settlements.
- Add user accounts and assign operational roles (vets, engineers, accountants).
- Upload and manage official company branding and logo for PDF reports.
- Log monthly attendance for supervising vets and agricultural engineers.
- Real-time access to high-level profitability, flock KPI dashboards, and costs.

2. Supervising Veterinarian (Admin / Supervising Vet)

- Technical and medical oversight across all company production sites.
- Design, approve, and adjust vaccination and biosecurity protocols.
- Monitor daily weight gain curves, feed intake, and Feed Conversion Ratio (FCR).
- Log and audit attendance for farm engineers across assigned facilities.
- Review and approve retrospective daily report requests for missing days.

3. Field Veterinarian (Field Vet)

- Conduct regular on-site necropsies and clinical bird assessments.
- Prescribe water and feed medications with specific dosage schedules.
- Track withdrawal periods to guarantee flock safety before market slaughter.
- Deliver daily clinical notes and environmental guidelines to farm engineers.

4. Agricultural Farm Engineer (Farm Engineer)

- Log daily bird mortality, feed bags/tons consumed, water intake, and weights.
- Classify and record egg production (cartons, trays, broken) for layers/breeders.
- Record daily morning and evening attendance for farmworkers.
- Issue formal egg dispatch and sales permits from on-site farm storage.
- Manage petty cash custody and submit structured expense balance sheets.

5. Accounts Manager (Account Manager)

All Rights Reserved © Reesh System 2026

- Review and approve engineer cash custody settlements and vouchers.
- Issue official payment and receipt vouchers for bird and egg revenue.
- Read-only export access to all worker, engineer, and vet attendance sheets.
- Export consolidated flock PDF audit reports without technical edit permissions.

Chapter 3: Farms, Houses & Flock Production Cycles

Tailored workflows across 4 major commercial poultry activities:

Supported Poultry Production Activities:

1. White Broilers:

Fast cycle (30-40 days), intensive tracking of bird weight, FCR, and critical early mortality.

2. Sasso & Color Broilers:

Medium cycle (55-70 days) with customized growth curves for rustic and colored breeds.

3. Commercial Table Layers:

Extended production cycle up to 80-90 weeks, rearing capitalization, Hen-Day %, and egg grading.

4. Broiler Breeders:

Hatching egg production, female/male separate flock feeds, fertility, and hatchery set tracking.

Launching a New Flock Cycle:

Setting up initial flock parameters:

- Select farm house and assign a cycle name (e.g., Winter 2026 - House 1).
- Select breed standard (Ross 308, Cobb 500, ISA Brown, Lohmann).
- Enter initial chick count received, initial day-old chick weight, and chick purchase cost.
- Assign responsible farm engineers and supervising veterinarian.

Reesh embeds benchmark performance targets from major genetics breeders. The system automatically benchmarks your flock daily against target curves, alerting you whether your birds are ahead or trailing in growth and feed conversion.

Closing & Archiving Flock Cycles:

Consolidated final accounting:

Upon full flock marketing, the owner or admin clicks "Close Cycle". Reesh aggregates total liveweight sold, total feed tons consumed, final FCR, cumulative mortality %, and European Production Efficiency Factor (EPEF), safely moving the flock to the archive with full audit report access.

All Rights Reserved © Reesh System 2026

Chapter 4: Daily Operational Logs & Egg Inventory

Daily workflow for agricultural engineers inside the houses:

Core Daily Metrics Logged per House:

- Daily Mortality: Dead birds removed and suspected causes.
- Feed Consumption: Bags or tons consumed with feed type (Starter, Grower, Finisher).
- Water Meter Intake: Daily cubic meters consumed to monitor drinking efficiency.
- Sample Weights: Periodic bird weighings to calculate Average Daily Gain (ADG).
- Field Notes: House temperature, humidity, ventilation, and vet instructions.

Egg Production & Storage Management:

Full commercial flow for layer and breeder farms:

1. Production Classification:

Record intact cartons, trays, loose eggs, cracked eggs, and hatching eggs with real-time Hen-Day Production % calculations.

2. Farm Storage Ledger:

Maintains real-time inventory balances (Previous Balance + Daily Production - Dispatched = Current Stock).

3. Official Dispatch Permits:

When loading trader trucks, engineers issue official serialized dispatch permits automatically deducted from stock.

Every dispatch permit logged at the farm immediately displays in the account manager dashboard to generate matching receipt vouchers and ensure zero discrepancies.

Chapter 5: Multi-Engineer Assignments & Smart Replacement

Operational agility tailored for large facilities and multiple shifts:

1. Multiple Active Engineers per Farm (Co-Engineers):

Reesh enables assigning multiple agricultural engineers to the same farm simultaneously. Both co-engineers enjoy full permissions to log daily metrics, feed consumption, worker attendance, and egg dispatch notes seamlessly without permission conflicts.

Smart Engineer Replacement Lifecycle:

Smooth handover with complete financial and data protection:

What happens when assigning a new engineer to an occupied farm?

Reesh presents the manager with an intelligent dialog:

- Co-Engineer Option: The existing engineer remains active, working collaboratively with the new engineer.
- Replacement Option: The new engineer replaces the old one, automatically triggering 4 security safeguards:

The 4 Pillars of Engineer Replacement Safety:

A. Financial Cash Custody Audit:

The system instantly scans for open un-settled cash custodies for the old engineer, alerting management with settlement numbers and outstanding balances prior to handover.

B. Real-Time Session Termination:

The replaced engineer account is immediately deactivated and disconnected from open mobile/desktop sessions, preventing unauthorized subsequent reports.

C. 100% Data & History Preservation:

All historical daily reports, egg movements, and worker logs submitted by the previous engineer remain intact with their identity preserved.

D. Prorated Monthly Attendance:

Monthly attendance rates are calculated based strictly on the engineer active tenure days (e.g., 10/10 days = 100% rather than 33%), with a "(Former Engineer)" badge.

All Rights Reserved © Reesh System 2026

Chapter 6: Decoupled Monthly Attendance System

Independent monthly attendance ensuring worker and staff accountability:

Decoupled from Production Cycles:

The attendance module functions on a continuous monthly calendar basis, remaining fully active even during downtime, house sanitization, or between flock cycles, ensuring uninterrupted monthly payroll computations.

The 3 Attendance Tiers & Responsibility:

Separation of recording duties:

Staff Tier	Logged By	Audited By	Export Formats
Farm Workers	Agricultural Engineer	Supervising Vet & Owner	Daily & Monthly Sheet
Agricultural Engineers	Supervising Vet / Owner	Account Manager & Owner	Prorated Monthly Sheet
Veterinarians	Company Owner / Admin	Account Manager & Owner	Monthly Log & Visits

Smart Missing Attendance Banner:

Automated 14-day gap detection:

What if staff forgot to record yesterday attendance?

Reesh automatically audits the past 14 days. If unlogged dates exist, an orange banner appears with a direct action button: "Log Missing Attendance Now", opening the roster for that specific date instantly.

Account managers can view, filter by date range, and export official PDF attendance sheets across any farm to process payroll accurately.

All Rights Reserved © Reesh System 2026

Chapter 7: Financial Management, Custodies & Vouchers

Documented financial workflows securing on-site farm expenditures:

1. Issuing Cash Custody:

Account managers disburse operating cash custodies to engineers for emergency farm needs (fuel, parts, maintenance). The balance immediately links to the engineer account with a unique settlement number.

2. Logging Operating Expenses:

Engineers log each purchase with category, date, amount, and receipt number. Reesh updates remaining cash balance in real time.

3. Custody Settlement & Approval:

Engineers submit the final statement. The account manager reviews attached items, verifies receipts, and approves the settlement to disburse replenishment.

Official Payment & Receipt Vouchers:

Standardized paperless financial documentation:

- Receipt Voucher: Documenting cash/transfer collections for egg sales, manure, or marketed birds.
- Payment Voucher: Documenting chick payments, feed deliveries, vet drugs, and staff payroll.
- Official PDF Generation: Generates branded PDF vouchers with amounts in numbers and words, signatures, and company logo.

All Rights Reserved © Reesh System 2026

Chapter 8: Standardized Reports & Company Branding

Tripartite header presenting your corporate identity before banks and auditors:

Cloud Company Branding:

Owners upload corporate logos via the Settings screen ("Upload Company Logo"). The logo is saved securely to cloud storage and automatically rendered in headers, dashboards, and all generated PDF documents.

The Standardized Tripartite PDF Header:

Balanced layout adapting to reading direction:

Reesh Logo (Left)

Reesh Poultry Farm Management

Golden Reesh Poultry Enterprise

Farm: Facility #1 - Cairo-Alex Desert Road

Egg Storage Movement Report | Date: 2026-10-31

Company Logo (Right)

In Arabic, the positions automatically flip: Reesh logo on Right, Company logo on Left.

Available Report Types:

Executive reports generated with a single click:

- Consolidated Flock Cycle Report: Complete flock summary from placement to marketing.
- Daily Production Log: Verified documentation of feed, mortality, and weights.
- Monthly Worker Attendance Sheet: Full statistical summary of worker attendance.
- Engineer & Vet Attendance Log: Official documentation for payroll and shift audits.
- Egg Storage Ledger: Tracking in/out egg movements and dispatch balances.
- Custody Settlements & Financial Vouchers: Tax-ready accounting documentation.

All Rights Reserved © Reesh System 2026

Chapter 9: Local Encrypted Backup & Data Safety

100% operational resilience and peace of mind:

Local Encrypted Backup Engine:

In addition to real-time cloud data replication, Reesh includes an encrypted local backup engine allowing enterprise owners to create point-in-time offline archives onto USB drives or external PCs with a single click. Files are encrypted with military-grade AES standards.

Backup & Restore Workflow:

- To Backup: Settings > Backup Management > "Create New Backup" > save file.
- To Restore: Settings > Backup Management > "Restore from File" > select file to recover instantly.

Chapter 10: Sales & Certified Support Channels

Dedicated assistance whenever you need it:
